

This year SBS April meeting in Lille, France, followed-up with screening trends report stating that “In 2009, GPCRs are expected to replace protein kinases as the most common molecular target used by HTS laboratories.”

TimTec GPCR Ligands library, [ActiTarg-G](#) , currently counts 2,300 molecules. GPCRs are the largest family of cell surface receptors being integral to the number of cellular and physiological functions. [More](#)
