

Activity-Aimed Sets are compound selections with target specific focus. The majority of the sets include TimTec active compounds featured in leading scientific publications. Each set is complemented with analogs selection to broaden chemical space around known structural material.

Currently available Activity-Aimed Sets:

Anti-Infectives

Anti-Inflammatory

O-GlcNAc Transferase Inhibitors and Analogs

Aryl Hydrocarbon Receptor Ligands and Analogs
Activators of Neutrophils and Analogs
Inhibitors of Anthrax LF and Analogs
Potent TNF-alfa Inducers and Analogs
