The ActiTarg-K Collection is a screening set of molecules that contain chemical lattices present in compounds reported in the technical or patent literature to possess protein kinase inhibiting properties. There are over 6,600 compounds, kinase inhibitors in this collection.

ActiTarg-K6600 represents a variety of different chemical series. Structural constraints and novel pendants within these molecules provide the structural variability to identify new chemical directions for hit optimization.

Top diversity selection of 960 compounds, ActiTarg-K960, comprises a pre-filtered diversity collection of 12 plates that should provide a high value screening library of drug-like molecules for identifying synthesis direction for new protein kinase inhibitors in a smaller screening application.

Compounds are available for cherry-picking and/or as a collection in 96, 384-well plates and in vials.

About Kinase Modulators

Among the many strategies to cancer therapeutics, protein kinase inhibition has emerged as particularly viable and promising approach. This interest has been stimulated by an understanding of the key role this broad family of phosphorylating enzymes plays in controlling proliferative processes, as well as the success of agents like GleevecTM, imatinib in the treatment chronic myeloid leukemia and certain solid tumors. Along with this tyrosine kinase inhibitor, many other agents that inhibit this, and other cell cycle regulating kinases CDK’s, are currently being developed for the treatment of cancer and immune system disorders.

To meet the interest and needs of investigators who are trying to identify low molecular weight, drug-like molecules with the ability to inhibit protein kinases, TimTec has assembled a variety of agents with chemical lattices found in compounds with reported kinase activity.
Kinase Modulators - ActiTarg-K Library

**Featured Screening Results for ActiTarg-K**

Pilot screening of small sub-set, 300 compounds, from the Tim Tec ActiTarg-K library identified a compound, ST018584, selective ATPase inhibitor with anti-BKV activity:

ST018584
MW 578.20
MF C24H15BrCl2N2O6
2,2-bis(4-chlorophenoxy)-N-[(6-bromo-2-oxochromen-3-yl)carbonylamino]acetamide

1,200 compounds from ActiTarg-K were screened using ELISA-based kinase assay to identify inhibitors of PIM1 kinase:

“The pim family of serine-threonine kinases is composed of three highly homologous genes, pim-1, pim-2, and pim-3. These enzymes are increasingly being recognized as important mediators of survival signals in cancers, stress responses, and neural development. In addition, these kinases are constitutively expressed in some tumors and function as true oncogenes. Thus, they are of significant interest as targets for therapeutic intervention.”
Positive hits are available for re-supply from TimTec:

**ST024706**
Quercetin dihydrate  
C15H10O7  
302.24  

**ST024703**
Luteolin  
C15H10O6  
286.24  

**ST024709**
Glabranine  
C20H20O4  
324.38
ActiTarg-K is one of TimTec targeted libraries. Other targeted screening collections of interest are:

- **ActiTarg-G**  GPCR Ligands
- **ActiTarg-P**  Protease Inhibitors
- **ActiTarg-S**  Serpins Inhibitors
- **ActiTarg-I**  Potassium Channel Modulators
- **ActiTarg-N**  Nuclear Receptor Ligands
- **ActiTarg-H**  HDAC Inhibitor

**ActiTarg-CNS**  Central Nervous System Receptors Modulators Library
